The distribution of ouabain-sensitive (Na⁺, K⁺)-ATPase activity was studied in the proximal convoluted tubule (PCT) and the immature and mature distal convoluted tubule (DCT) of the chick kidney. In addition, Na⁺, K⁺-ATPase activity was examined in the glomerular tuft and in the ureteric bud, the primitive renal vesicle and the early tubular aggregates of the metanephric mesenchyme. The distribution of ouabain-sensitive (Na⁺, K⁺)-ATPase activity was similar in the PCT and DCT in the chick embryo. The level of Na⁺, K⁺-ATPase activity, however, was significantly higher in the distal tubule as compared to the proximal tubule. Na⁺, K⁺-ATPase activity was also high in the collecting duct and the metanephric mesenchyme. These findings suggest that Na⁺, K⁺-ATPase activity plays an important role in maintenance of the ionic composition of the embryo's extracellular fluid.Q: Instrumenting only one Xcode project but multiple targets in swift I am trying to instrument code in Xcode and only instrument a single target in a project but instead I get all the targets in the project instrumented. But when I instrument a single target like this: Then I can see the instrumentation run only for the selected target. I think 2d92ce491b
