Category:Fluid dynamics Category:Fluid mechanicsThis invention relates to a device for preventing scuffing of rugs and carpets during the manufacturing of commercial carpet. More particularly, the invention relates to a device for preventing scuffing of rugs and carpets by forming undulations on the upper surface of the backing, engaging the pick of the carpet, or machine carpet, with the bumps on the upper surface of the backing. During manufacturing of a commercial carpet with the carpet backing surface being scored, or undulated by means of a roller or rollers along a wave-like path, there is a tendency of the carpet to scuff the roller or rollers. A conventional apparatus for preventing scuffing includes a carpet backing surface having evenly spaced and continuous undulations, as described in commonly assigned U.S. Pat. No. 3,832,975. However, one problem with such conventional arrangements is that the newly manufactured carpet cannot be rolled until the undulations are impressed in the carpet backing surface. Another problem is that it is difficult to remove a sheet of carpet backing from the roller in that the roller and sheet of carpet backing become wedged together.University and College Union The University and College Union (UCU) is the professional association of university lecturers and academic staff in the United Kingdom. It is a not-for-profit company limited by guarantee. History UCU originated in 1889 as the Association of University Lecturers (AUL) and College Lecturers' Association (CLA). In 1915, the AUL and CLA merged to form the Associated Universities and Colleges of the United Kingdom (AUCUK), but in 1919 became the British Association of University Teachers (BAUT) – as it is still known. The association was incorporated as a company limited by guarantee (a form of limited company) in 1999 and renamed as the University and College Union. The company has offices in London, Bristol, Cardiff, Edinburgh, Glasgow and Leeds. In
