Losyf (Magazine) is the only south african magazine which, Losyf (Magazine) is a best selling magazine for the past 8 years.Q: Apache POI: Different output when applying same macro to multiple pages I'm currently reading through a book on Apache POI. In the exercises I came across this issue. I have tried to understand why this happens, but unfortunately without success. I'm using Java, OpenOffice 3.2.1 and Apache POI 3.8. Below a simple code snippet I use to populate the book with a template. In the last lines I create two versions of the template by doing two calls of the content area macro with a minor change in the XML. The first version creates a new page, the second adds it to the existing page. In both cases the "KeyWords" content field in the template is populated. 2d92ce491b
