Function of Myelin Maintained by Axon-Derived
Microglia. In the central nervous system, a major
component of myelin is the axon, which wraps itself in
its membrane and is electrically insulated from adjacent
neurons. Myelin sheaths perform several critical
functions, including facilitating saltatory conduction of

action potentials, the efficient propagation of nerve impulses, and the protection of axons from physical damage. The myelin sheaths of neurons are continuously maintained by specialized glial cells called oligodendrocytes, which are differentiated oligodendrocyte progenitor cells. Recent studies have shown that oligodendrocyte progenitor cells in the adult central nervous system generate oligodendrocytes that appear to differentiate in a region-specific manner. Oligodendrocyte progenitor cells are associated with axons through cell-cell interactions and act as microglia that provide maintenance and protection of myelin. Agave Americana, also known as algodón de las Águilas, is an evergreen cactus with edible, large, velvety leaves and spiky, green, top-shaped fruits. It grows in the arid desert region of southern California. Agave

americana is native to the Sonoran Desert in Arizona, southern California, and Mexico. Although some people refer to this plant as the century plant, it is more accurately called the century plant. It grows to an average height of about 3 feet (1 meter) and produces large fruits that may weigh up to 15 pounds (6.8 kilograms) when fully mature. This plant produces
