Review: Arnova 10 tablet with Android 2.3.4 and 3.0
Gingerbread. A: Let's start with your hardware: 4.5"
capacitive display (1024x600) Dual Core 1.2 GHz
processor 7" capacitive display (800x480) 1GB RAM
So the most likely source of problems is the hardware
(considering that you only say it is "too slow") rather
than the firmware. It has nothing to do with the
Android OS. Let's see what kind of RAM your
computer has: \$ cat /proc/cpuinfo | grep "RAM"
